CORE STRENGTHS

Solar PV, BESS & Hybrid Systems
Field Troubleshooting & Fault Diagnosis
Root Cause Analysis & CAPA
Testing, Commissioning & Validation
FAT / PDI & Site Acceptance
Technology & Vendor Evaluation
Design & Drawing Review
Test Procedures, Checklists & Standards
Technical Documentation & Training
Cross-Functional & OEM Coordination
Team Leadership & Mentoring

TECHNICAL KNOWLEDGE

Solar PV
Crystalline modules, string & central inverters, fixed-tilt & tracker structures, LT/HT cabling, inverter-duty transformers

Energy Storage
Containerised LFP batteries, BMS, PCS, EMS / SCADA, HVAC & fire detection / suppression, DC combiner architecture

Power & Protection
Transformers, 145 kV SF_6 breakers, CT / PT, 33 kV HT panels, AC/DC boards, UPS & battery banks, protection & earthing

Standards & Methods
IEC & IEEE standards, ISO 9001:2015, QAP / ITP, NCR / RCA / CAPA, calibration traceability, Lean Six Sigma

JUSTIN THOMAS

TECHNOLOGY LEAD — SOLAR, ENERGY STORAGE & HYBRID SYSTEMS

PROFILE

Electrical engineer with 11+ years across solar PV and battery energy storage, from five years of hands-on installation, commissioning and O&M troubleshooting to leading electrical delivery of a **125 MW / 500 MWh LFP BESS**. Has worked on ~1 GWh of BESS and ~3.9 GW of solar from every side of the delivery model: EPC contractor, Owner's Engineer, developer and government agency.

Has tested equipment at OEM factories, reviewed designs, diagnosed field faults and built root-cause and corrective-action systems. Brings that field-failure and equipment-testing knowledge to product roadmap, engineering standards and new product introduction.

RELEVANT TO THIS ROLE

- **Field troubleshooting:** five years of fault diagnosis, performance monitoring and breakdown maintenance on a 25.4 MW plant covering modules, inverters, switchgear and transformers.
- **Root cause & corrective action:** set up NCR, RCA and CAPA reporting on a 500 MWh BESS site; Lean Six Sigma Green Belt.
- **Testing & validation:** factory acceptance tests and pre-dispatch inspection of modules, inverters, transformers, switchgear and battery systems; site acceptance and commissioning.
- **Technology & vendor evaluation:** technical interface with battery, PCS, transformer, EMS/SCADA and UPS OEMs; design reviews and deviation decisions on technical merit.
- **Standards, documentation & training:** writes QAPs, ITPs, method statements, checklists and calibration matrices, and trains site teams on them.

PROFESSIONAL EXPERIENCE

Manager – Electrical Projects
Aug 2025 – Present

Amara Raja Infra Pvt. Ltd. (ARIPL)

> **Project:** JSW Renew Energy Thirty-Eight Ltd. — 125 MW / 500 MWh standalone LFP BESS, Kasaragod, Kerala (EPC scope; TCE as Owner's Engineer).

- Leads electrical delivery and QA/QC for one of India's largest storage assets under construction: containerised LFP battery systems, PCS, MV/HV balance of plant and the 145 kV evacuation interface.
- Technical interface for seven OEMs: Gotion (LFP battery containers), Hopewind (PCS), Shilchar and Trisquare (transformers, MV panels), CG Power, KEC (power cables), Smart Grid (EMS/SCADA) and Fuji Electric (UPS). Drives drawing approvals, pre-dispatch inspection, site acceptance and defect closure.
- Built the site problem-resolution system: RFI register with 278 entries tracked to closure, NCR and observation management, root cause analysis and CAPA reporting, and standard inspection checklists.

TOOLS

MS Project, AutoCAD, MS Office

EDUCATION

B.Tech — Electrical & Electronics Engineering
SCMS School of Engineering & Technology, Cochin · 2011–2015

CERTIFICATION

Certified Lean Six Sigma Green Belt (CLSSGB)

LANGUAGES

English, Malayalam, Hindi, Tamil

PERSONAL

Availability: Immediate

Preferred: Mumbai, Bengaluru, Hyderabad — open to pan-India & GCC relocation

PROFESSIONAL EXPERIENCE (CONTINUED)

Owner's Engineer — Quality & Inspection

Aug 2023 – Aug 2025

TQ Cert Services Pvt. Ltd. (Tata Projects Ltd.)

> **Projects:** 500 MW BESS + solar hybrid, Khavda, Gujarat | 1,034 MW Siyambar / Bandha solar, Jaisalmer, Rajasthan.

- As the client's technical authority on two of the country's largest renewable programmes, ran factory acceptance testing and pre-dispatch inspection at OEM works for PV modules, inverters, transformers, switchgear and battery systems, stopping non-conforming equipment before it reached site.
- Reviewed designs and drawings and decided deviation and concession requests on technical merit. Approved contractor QAPs, ITPs and field procedures, and issued, tracked and closed non-conformance reports through quality audits.

Project Lead

Aug 2022 – Aug 2023

Tata Power Renewable Energy Ltd. (TP Solapur / TPREL)

> **Projects:** 450 MWp / 335 MW AC solar, Bikaner, Rajasthan | 300 MW solar, Dholera, Gujarat | EV charging operations.

- Led developer-side execution across roughly 750 MW of utility-scale solar in two states, holding EPC contractors to schedule, quality and safety commitments.
- Drove sites to commissioning and commercial-operation readiness through site reviews, milestone verification and punch-list closure.
- Worked across engineering, procurement, contracts, HSE and O&M to resolve interface issues and keep multi-package sites in sequence.

Project Engineer — Implementation

Oct 2020 – Aug 2022

Solar Energy Corporation of India (SECI)

> **Projects:** 1.4 MWh island BESS, Lakshadweep | 2,050 MW Pavagada Solar Park, Karnataka.

- Delivered a 1.4 MWh island battery energy storage installation in Lakshadweep, integrating the storage system under logistically constrained, off-grid island conditions.
- Monitored developer and contractor delivery against scheme milestones for the 2,050 MW Pavagada Solar Park, one of the world's largest.
- Built the policy, tendering and stakeholder perspective that informs bid-stage technical scrutiny and commercially aware engineering decisions.

Electrical Engineer — Execution & O&M

Jun 2015 – Oct 2020

KC Kopar Energy Solutions

> **Project:** 25.4 MW solar at Cochin International Airport Ltd. (CIAL), the world's first fully solar-powered airport.

- Executed and maintained 25.4 MW of solar across ground-mount, rooftop and canopy installations in a live, security-controlled airport.
- Installed, tested and commissioned PV modules, inverters, LT/HT switchgear, transformers and evacuation infrastructure without disrupting airport operations.
- Ran O&M for five years: preventive and breakdown maintenance, performance monitoring, fault diagnosis and generation reporting. This built first-hand knowledge of how solar systems fail in the field.
