Jodhpur, Rajasthan

Subject: Application for Site Construction Head (DGM / GM) – 50–150 MW Wind Power Project, Fatehgarh

Dear Hiring Manager,

I am applying for the Site Construction Head (DGM / GM) role for your client's wind power project at Fatehgarh. I have spent more than 11 years building utility-scale renewable power plants, about 3.9 GW of solar and 1 GWh of battery storage in total. I have managed EPC contractors, run civil, mechanical and electrical site packages, and delivered the HV balance of plant and grid connection that a wind farm depends on.

Rajasthan is familiar ground for me. As Owner's Engineer on the 1,034 MW Siyambar / Bandha solar programme in Jaisalmer district, close to Fatehgarh, and as Project Lead on 450 MWp at Bikaner for Tata Power Renewables, I have worked with the remote logistics, harsh site conditions and the local authorities and communities that shape every site in the region.

Your key responsibilities line up closely with what I do today:

- **Project oversight and BOP:** I am currently leading electrical delivery for a 125 MW / 500 MWh BESS for JSW Renew Energy, covering MV / HV balance of plant, foundations and the 145 kV evacuation interface, with eight OEMs and vendors to coordinate.
- **Contractor management:** I have held EPC contractors to schedule, quality and safety commitments as the developer, as the Owner's Engineer, and as the contractor myself, so I know where each party's incentives lie.
- **Quality control:** I build and run QAP / ITP regimes, hold and witness points and NCR / RCA / CAPA cycles. On my current site, 278 RFIs have been tracked to closure.
- **Safety and schedule:** I enforce permit-to-work and HSE discipline, plan for weather risk, and track progress through MS Project, DPR / MIS and milestone verification through to commissioning and COD.

I have not yet led a WTG erection campaign, and I would rather say so plainly. The rest of a wind farm's construction scope is work I have delivered many times: civil foundations, 33 kV HT cabling and panels, pooling substations, 145 kV evacuation, multi-contractor coordination and statutory approvals. Crane planning, blade and nacelle logistics and OEM erection sequences are areas I would get up to speed on quickly, in the same way I moved from solar into GWh-scale storage. My Lean Six Sigma Green Belt training and my experience on the developer, Owner's Engineer, contractor and government sides would help me build a site organisation that the client, the Owner's Engineer and local stakeholders can all rely on.

I am willing to relocate to Fatehgarh / Jodhpur and can join at short notice. I would welcome the chance to discuss how I could deliver your project safely, on schedule and to the required quality. Thank you for considering my application.

Yours sincerely,

Justin Thomas
